

### GWR dia.O8 "Siphon C" 4-Wheel Milk Van

The layout of the side components is shown below (the sides fit **between** the ends).

The correct Spring/W-iron/Axlebox unit is the **4ft 6in** version (link accessible from the Siphon index page).

**NOTE :** Although the parts are similar in appearance to dia.O7 (the 40ft bogie "Siphon F") there are minor variations in some panel widths and door details, so are not interchangeable (there is a separate "Siphon F" pack available).

It is recommended that the printed parts are fitted onto 3mm plywood (or similar) to form a strong box.

The file for printing the tri-arc roof will be provided soon, alternatively you can make from stripwood or plastic card.
